

How to tell if Your pet is sick

Telltale signs of illness that means you may need to seek medical advice...

- 🚨 A major change in your pet's behavior. (Examples: An active lizard is no longer vigorous; a vocal dog stops barking; a laid-back cat gets frenetic; a talkative bird loses his voice).
- 🚨 Drinks significantly more or less water.
- 🚨 Turns up his nose to the food he has always enjoyed.
- 🚨 Stool appears different (in color and/or consistency).
- 🚨 Hides for more than a day and/or night.
- 🚨 Persistently throws up.
- 🚨 Breathes heavily while resting (and heat is not a factor).
- 🚨 Has a significant change in his sleeping habits.
- 🚨 A placid pet gets aggressive with a family member or pet.
- 🚨 Sheds excessively.
- 🚨 Has a new lump or a wound that isn't healing.
- 🚨 Has difficulty going up and/or down stairs.
- 🚨 Urinates frequently.
- 🚨 Has smellier breath.
- 🚨 Lacks stamina.
